Energy and Matter Exchange in the Biosphere — Practice Test

This practice test was made by AI and there may be mistakes. If a question or answer looks wrong, use the Flag a mistake button to let Brett know so he can fix it.

1 **A black bear feeds on berries, grasses, and salmon. The bear is best classified as an**

- A herbivore
- B carnivore
- C omnivore
- D detrivore

2 **A clear glass of water with golden oil droplets floats in it. In the water cycle, water vapour in the atmosphere cools and changes into tiny liquid droplets that form clouds. This process is called**

A evaporation

B condensation

C precipitation

D transpiration

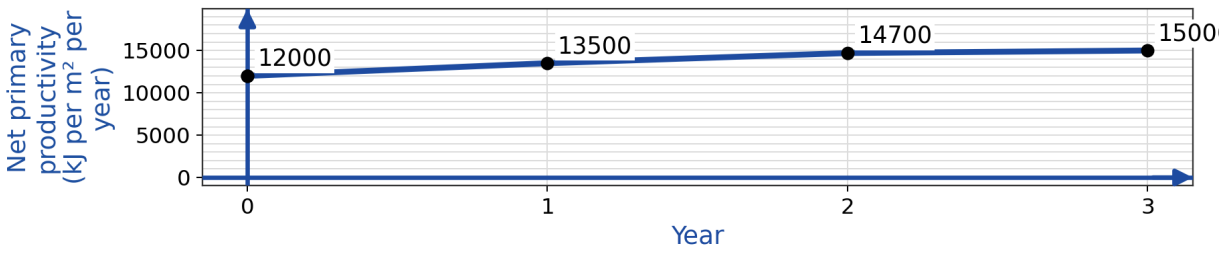
3 **Clearing a large area of forest increases the amount of carbon dioxide in the atmosphere mainly because**

- **A** soil bacteria stop converting nitrates into nitrogen gas
- **B** rainfall over the cleared area decreases
- **C** the animals of the forest move away and respire elsewhere
- **D** there are fewer trees left to remove carbon dioxide by photosynthesis

Understand It with Pulse | Flag a mistake

4 **The graph shows the net primary productivity of a meadow over four years. The net primary productivity in year 2, in kJ per m² per year, is**

_____



ANSWER _____

Understand It with Pulse | Flag a mistake

5

All heterotrophs ultimately depend on autotrophs because autotrophs

A capture light energy and store it in food that other organisms can use

B return nitrogen compounds to the soil when they die

C break down dead organisms and recycle their nutrients

D obtain energy by consuming other organisms

Understand It with Pulse | Flag a mistake

ANSWER KEY

1. C
2. B
3. D
4. 14700
5. A
