DNA and the Diversity of Living Things — Practice Test

This practice test was made by AI and there may be mistakes. If a question or answer looks wrong, use the Flag a mistake button to let Brett know so he can fix it.

1 **Bright green plant leaves in sunlight. A plant has genotype AA. The term for this genotype is**

A heterozygous

B hybrid

C homozygous dominant

D recessive

Understand It with Pulse

Flag a mistake

2 **Two organisms have the same phenotype but different genotypes. This is possible because**

- A the dominant allele hides the recessive allele in a heterozygote
- B phenotype is decided by the environment alone
- C genotype and phenotype mean the same thing
- D recessive alleles are never inherited

Understand It with Pulse | Flag a mistake

3 **A tall pea plant with genotype Aa is crossed with a short plant with genotype aa. The percent of offspring expected to be short is**

- A 25 percent
- B 75 percent
- C 100 percent
- D 50 percent

Understand It with Pulse | Flag a mistake

4 **A mutation that occurs in a body cell of an adult is**

A passed to all of the adult children

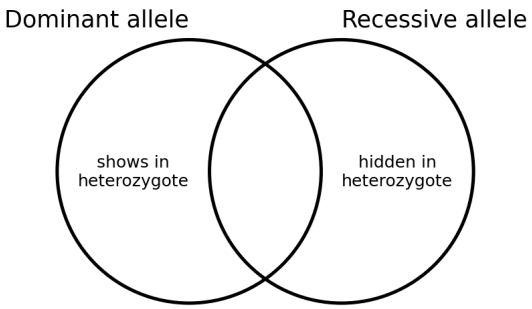
B not passed to the adult children

C always repaired before cell division

D passed only to daughters

Understand It with Pulse | Flag a mistake

5 **The diagram compares a dominant allele and a recessive allele. The statement in the overlapping region is**



A they are found only in animals

B they always show in the phenotype

C they are different forms of the same gene

D they are located on different chromosomes

Understand It with Pulse | Flag a mistake

ANSWER KEY

1. C
2. A
3. D
4. B
5. C
