Sinusoidal Functions — Practice Test

This practice test was made by AI and there may be mistakes. If a question or answer looks wrong, use the Flag a mistake button to let Brett know so he can fix it.

1 **The graph below shows a sinusoidal function. An equation that models the graph is**

- **A** y = 2sin(3x) - 1
- **B** y = 2cos(3x) - 1
- **C** y = 2cos(120x) - 1
- **D** y = -2cos(3x) - 1

3 **The graph below shows the depth of water at a pier, in metres, over time, in hours. An equation for the depth, d(t), is**

- **A** d(t) = 3.2sin(30t) + 4.6
- **B** d(t) = 4.6cos(30t) + 3.2
- **C** d(t) = 3.2cos(12t) + 4.6
- **D** d(t) = 3.2cos(30t) + 4.6

4 **For the function y = 4sin(2(x + 15°)) - 3, the phase shift and the equation of the axis are**

- **A** Phase shift: 15° to the right Axis: y = -3
- **B** Phase shift: 30° to the left Axis: y = 3
- **C** Phase shift: 15° to the left Axis: y = -3
- **D** Phase shift: 15° to the left Axis: y = 3

5 The hours of daylight in a city are modelled by $H(t) = 6.1\sin(b(t - 79)) + 11.9$, where t is the day of the year and the period is 365 days. To the nearest hundredth, the value of b is

A 0.99

B 1.00

C 1.97

D 0.49

7 **A piston in an engine moves up and down. Its height reaches a maximum of 14 cm at t = 3 s and the next minimum of 2 cm at t = 9 s. The period of the motion is**

- **A** 6 s
- **B** 12 s
- **C** 24 s
- **D** 3 s

8 **The graph of y = asin(b(x - c)) + d has a period of 240° and a phase shift of 30° to the right. The values of b and c are**

- **A** b = 240 c = 30°
- **B** b = 1.5 c = -30°
- **C** b = 2.4 c = 30°
- **D** b = 1.5 c = 30°

9 **The height of a load on a hoist, in metres, is modelled by h(t) = 6sin(30t) + 10, where t is in seconds. The smallest positive value of t for which the height is a maximum is ____ Record your answer as an integer.**

ANSWER _____

Understand It with Pulse | Flag a mistake

10 **A wind turbine has blades 12 m long. The hub of the turbine is 15 m above the ground, and a point at the tip of a blade starts at the top. The turbine completes one rotation in 6 seconds. The height of the point, h(t), after t seconds is modelled by**

A h(t) = -12cos(60t) + 15

B h(t) = 12sin(60t) + 15

C h(t) = 12cos(60t) + 15

D h(t) = 24cos(60t) + 15
