Practice Test

Unit 2: Genetics and Heredity

25 Questions

Original practice test based on the North Dakota curriculum. Work through each question, then check your answers at the end.

This practice test was made by AI and there may be mistakes. If a question or answer looks wrong, use the Flag a mistake button to let Brett know so he can fix it.

Question 1

A gene is best described as a section of DNA that codes for a

A) Chromosome

B) Protein

C) Lipid

D) Cell

Understand It with Pulse

Flag a mistake

Question 2

Different forms of the same gene are called

A) Alleles

B) Codons

C) Proteins

D) Chromatids

Understand It with Pulse

Flag a mistake

Question 3

An organism genotype is its

A) Observable traits

B) Number of chromosomes

C) Genetic makeup

D) Cell type

Understand It with Pulse

Question 4

An organism phenotype is its

A) DNA sequence

B) Allele pair

C) Chromosome count

D) Observable traits

Understand It with Pulse Flag a mistake

Question 5

An organism with two identical alleles for a gene is

A) Homozygous

B) Heterozygous

C) Hybrid

D) Recessive

Understand It with Pulse Flag a mistake

Question 6

An organism with two different alleles for a gene is

A) Homozygous

B) Heterozygous

C) Purebred

D) Dominant

Understand It with Pulse Flag a mistake

Question 7

In a cross between two heterozygous pea plants Aa times Aa what fraction of offspring are expected to show the dominant trait

A) One fourth

B) One half

C) Three fourths

D) All of them

Understand It with Pulse

Flag a mistake

Question 8

In a cross between Aa and aa what percent of offspring are expected to be heterozygous Aa

Understand It with Pulse

Flag a mistake

Question 9

If two heterozygous parents have 200 offspring about how many are expected to show the recessive trait

Understand It with Pulse

Question 10

Mendel law of segregation states that allele pairs separate during the formation of

A) Gametes

B) Proteins

C) Ribosomes

D) Enzymes

Understand It with Pulse | Flag a mistake

Question 11

Mendel law of independent assortment states that genes for different traits are inherited

A) Always together

B) Independently

C) Only from the mother

D) Only from the father

Understand It with Pulse | Flag a mistake

Question 12

When a red flower and a white flower produce pink offspring the pattern is called

A) Codominance

B) Complete dominance

C) Incomplete dominance

D) Linked inheritance

Understand It with Pulse | Flag a mistake

Question 13

In human blood type a person with type AB blood shows both A and B antigens This is an example of

A) Incomplete dominance

B) Recessive inheritance

C) Sex linkage

D) Codominance

Understand It with Pulse

Flag a mistake

Question 14

A dihybrid cross between two heterozygous parents is expected to give a phenotype ratio of

A) 9 to 3 to 3 to 1

B) 3 to 1

C) 1 to 2 to 1

D) 1 to 1

Understand It with Pulse

Question 15

A trait carried on the X chromosome appears more often in males because males have

A) Two X chromosomes

B) Only one X chromosome

C) No Y chromosome

D) Two Y chromosomes

Understand It with Pulse

Question 16

A female human normally has which pair of sex chromosomes

A) XY

B) YY

C) XX

D) XO

Understand It with Pulse

Question 17

Down syndrome is usually caused by an extra copy of chromosome

Understand It with Pulse

Flag a mistake

Question 18

The failure of chromosomes to separate properly during meiosis is called

A) Nondisjunction

B) Transcription

C) Replication

D) Crossing over

Understand It with Pulse

Question 19

A change in the DNA sequence of a gene is called a

A) Codon

B) Mutation

C) Allele

D) Phenotype

Understand It with Pulse

Flag a mistake

Question 20

A pedigree chart is most useful for tracing

A) Enzyme activity

B) Cell division

C) A trait through a family

D) Protein shape

Understand It with Pulse

Question 21

A carrier of a recessive disorder has one copy of the recessive allele and usually

A) Shows the disorder

B) Has no copies

C) Cannot pass it on

D) Does not show the disorder

Understand It with Pulse Flag a mistake

Question 22

DNA replication produces two molecules each with one old strand and one new strand This is called

A) Semiconservative replication

B) Conservative replication

C) Translation

D) Transcription

Understand It with Pulse Flag a mistake

Question 23

During meiosis crossing over exchanges genetic material between

A) Sister chromatids

B) Homologous chromosomes

C) Ribosomes

D) Mitochondria

Understand It with Pulse Flag a mistake

Question 24

Which process creates new combinations of alleles in offspring and increases genetic variation

A) Mitosis

B) Cloning

C) Sexual reproduction

D) Binary fission

Understand It with Pulse

Flag a mistake

Question 25

Two parents are both heterozygous for a trait What percent of their offspring are expected to be homozygous dominant

Understand It with Pulse
