Statistics and Graphs — Practice Test

This practice test was made by AI and there may be mistakes. If a question or answer looks wrong, use the Flag a mistake button to let Brett know so he can fix it.

1 **A graph of monthly sales shows values of 98 and 102, but its vertical axis runs only from 90 to 105. Why does the second bar look so much larger than the first?**

- **A** The second value is actually twice the first
- **B** The bars are different colours
- **C** The truncated axis exaggerates a small difference of only 4
- **D** The graph should have been a circle graph

8 **In a bar graph, one bar for the same value is drawn much wider than the others, while all bar heights match their values. Why is this graph misleading?**

- A Wide bars are easier to read
- B The wider bar covers more area, so its value looks larger than the others
- C The graph has a title
- D The axis starts at zero
