Reading II - Rain on One Side of the Ridge

Use this reading for questions 1 to 2.

We hiked up the west side of the ridge in steady rain. The trail was muddy, the trees were dripping, and every small stream was full. At the top, the wind was strong and cold.

On the way down the east side, the ground grew drier with every step. By the bottom, the grass was yellow, the soil was dusty, and a farmer told us he waters his crops from a creek because summer rain is unreliable here.

1 **The main idea of Reading II is that rainfall can differ sharply on two sides of a ridge**

- A because air loses moisture as it rises and crosses the ridge
- B because hikers always bring rain with them
- C because farmers control the weather
- D because east sides never receive wind
